

The DSWA accepted a bid from Colosimo & Son in the amount of \$921,250.00 (with a change order, there is a deduction of \$134,625.00) Total Cost of the project- **\$786,625.00**

We have already spent \$11,400.00 in engineering costs, televising the storm system in that area, and surveys.

The DSWA has secured a loan in the amount of \$600,000.00 and budgeted \$200,000.00 out of the operating account.

Monthly loan payments- \$6,060.46 for 10 years.

Phase I of the project consists of the installation of a 72” Corrugated Metal Pipe Detention Tank (Texas Ave), eight feet deep, and additional storm sewer conveyance facilities. This phase of the project will include the addition of storm sewers along Kelton Avenue to collect and convey runoff to the larger downstream storm sewer system. The runoff that currently flows through Athens Alley, via either overland flow or through the existing storm sewer, will be re-routed through the proposed detention tank and the proposed 36” corrugated plastic pipe to the existing downstream system.

The improvements will collect approximately 10 cubic feet per second (CFS) of runoff for the 10-year storm event that currently flows down Athens Alley.

The West Liberty Ave section of the project was removed and will be put out to bid as a standalone project in itself.
